EDUCATION

Christ University <i>M.Tech in Computer Science</i>	Bengaluru, Karnataka <i>Jul. 2025 – May 2027</i>
Vellore Institute of Technology <i>B.Tech in Computer Science and Engineering CGPA: 7.9/10</i>	Bhopal, Madhya Pradesh <i>Aug. 2021 – Jun. 2025</i>

EXPERIENCE

Project Intern – AI/ML & Space Weather <i>National Atmospheric Research Laboratory (NARL-ISRO)</i>	Apr. 2025 – Jul. 2025 <i>Tirupati, Andhra Pradesh</i>
- Trained deep learning models (LSTM, ANN) for magnetospheric energy analysis and solar wind coupling using TensorFlow and Scikit-learn on OMNI2 datasets with 10+ geophysical parameters, contributing to ISRO's operational forecasting pipeline - Engineered a 2D TEC (Total Electron Content) mapping system from GNSS ionospheric data using spatial interpolation, enabling near-real-time space weather prediction - Co-authored technical documentation for research publications; collaborated with PhD scientists on data preprocessing, model validation, and result interpretation	
Machine Learning Intern <i>Unified Mentor</i>	Feb. 2025 – Apr. 2025 <i>Remote</i>
- Designed and deployed an end-to-end ML pipeline for vehicle price prediction achieving 92% accuracy with ensemble methods (Random Forest, XGBoost), including feature engineering, cross-validation, and hyperparameter tuning - Developed a real-time ASL gesture recognition system using a custom CNN (TensorFlow + OpenCV) achieving 95% accuracy across 26 classes at 30 FPS; applied model quantization to cut inference latency by 40% - Implemented a heart disease classifier achieving 88% precision; tackled class imbalance with SMOTE and evaluated with ROC-AUC and Precision-Recall curves	

PROJECTS

Facial Reconstruction from CCTV Footage <i>GAN, OpenCV, Super-Resolution</i>	2024
Implemented ESRGAN to enhance low-res surveillance frames by 4x; improved face recognition accuracy from 65% to 89% on degraded footage, demonstrating real-world forensic applicability	
Geosynta – Geospatial Data Analysis Platform <i>Python, Scikit-learn, QGIS, Matplotlib</i>	2025
Developed a clustering toolkit (K-Means + DBSCAN) for spatial pattern recognition on 100K+ geographic coordinates; generated interactive GIS visualizations for exploratory geospatial analysis	
Solar Wind–Magnetosphere ML Forecasting <i>Python, TensorFlow, LSTM, OMNI2</i>	2025
Prototyped sequence models (LSTM, GRU) to forecast geomagnetic disturbances 1–3 hours ahead using 10+ solar wind parameters; achieved skill scores competitive with ISRO's baseline physics models	

SKILLS

Languages: Python, C/C++, JavaScript, SQL, Rust, Go
ML and Deep Learning: TensorFlow, PyTorch, Keras, Scikit-learn, Computer Vision (CNN, GAN, YOLO), NLP, LLMs
Data Science: Pandas, NumPy, Matplotlib, Seaborn, Statistical Analysis, SMOTE, A/B Testing, Power BI
Geospatial and Remote Sensing: QGIS, GIS, Spatial Interpolation, GNSS, Geodata Processing
MLOps and Tools: Git, Docker, FastAPI, Flask, Jupyter, Linux/Unix, RESTful APIs, Agile/Scrum
Databases: MySQL, MongoDB, Oracle 10g XE, NoSQL

CERTIFICATIONS

- AI/ML for Geodata Analysis** – ISRO-IIRS
- Applied Machine Learning in Python** – Coursera, University of Michigan
- Cloud Computing (Elite Silver)** – NPTEL
- Advanced Software Engineering Simulation** – Walmart Global Tech

ACHIEVEMENTS

- Competitively selected for NARL-ISRO research internship from a national applicant pool
- Solved **200+ DSA problems** across LeetCode, GeeksforGeeks, and Code360
- Maintained 7.9/10 CGPA at VIT Bhopal while completing two industry internships and multiple research projects
